

ChamberTite Dispenser Sumps

Forecourt Solutions are pleased to announce the availability of our own range **ChamberTite** Dispenser Sumps. The **ChamberTite** dispenser sump provides a watertight testable chamber for all your pump piping requirements with the ability to install pipework between 480 to 770 mm deep. Should you wish to install pipework at shallower depths this can be accommodated by reducing the dispenser sump throat height. Depicted is our 1100 x 460 mm sump although other sump sizes are available upon request. Sumps are principally rotationally moulded however special sizes can be cost effectively produced for small number orders by fabrication thus avoiding the tooling costs for limited number designs.

Each unit can be supplied with or without mounting frame and we also offer a range of adjustable length stabiliser bars for mounting of shear valve and for riser support. The sumps are further compli-

mented by our own **ChamberTite** pipe, duct and conduit entry boots. Entry boot seals can be provided for your pipe and duct size requirements and a large range of electrical cable gland sizes.

Dispenser Sump Part No's	CDS1100-460-860	1100 x 460 x 860mm
	CDS1000-440-860	1000 x 440 x 860mm

Chambers are manufactured using natural polyethylene as it provides good light levels within the chamber to assist installation however should you wish to have your units supplied in a particular colour this can be accommodated. Further sump sizes will be added to the range to meet customer requirements. We will be happy to advise you on the sump to suit your dispenser if you are able to provide us with a base-plan for the pump you intend to install.
